

ShopSphere Customer Retention Policy

Fictional knowledge-base document created for the ShopSphere AI Data Analyst/RAG academic project. This document is synthetic and should not be treated as a real company policy.

1. Purpose

The Customer Retention Policy provides a framework for identifying customers who may need additional support and for offering appropriate retention actions.

2. Indicators

Potential indicators of customer disengagement may include reduced usage, repeated support contacts, payment delays, changes in purchasing activity, and negative service experiences. These indicators should be interpreted together rather than treated as automatic proof that a customer will churn.

3. Customer Segmentation

Customers may be grouped into engagement or risk segments using approved analytics models. Segments should support prioritization and should not be used as the sole basis for adverse decisions.

4. Retention Actions

Appropriate actions may include proactive support, service education, plan review, resolution of billing issues, or information about available benefits. Offers must follow applicable business rules.

5. High-Support Customers

Customers with repeated support contacts should receive investigation of the underlying issue. The objective is to resolve the customer's problem rather than simply prevent cancellation.

6. Payment-Delay Customers

Customers experiencing payment delays may need billing assistance. Support teams should first help resolve payment issues and explain relevant account options.

7. Monitoring

Retention initiatives should be evaluated using measurable outcomes such as retention rate, repeat purchases, support resolution, and customer satisfaction where available.

8. Responsible Use of Analytics

Churn predictions are indicators rather than guarantees. Employees should avoid making unsupported assumptions about individual customers based only on a model score.
